

IJCAI 2025 CALL FOR PAPERS (MAIN TRACK)

Important Dates (all times are 23:59 Anywhere On Earth, UTC-12)

Abstract submission deadline: January 16, 2025

Author information and Full paper submission deadline (including Appendix and resubmission information): January 23, 2025

Summary reject notification: March 7, 2025

Author response period: April 6-9, 2025

Paper notification: April 28, 2025

Conference (Montreal): Saturday, August 16 to Friday, August 22, 2025.

Satellite event (Guangzhou): Thursday, August 28 to Sunday, August 31, 2025.

We invite submissions for the 34th International Joint Conference on Artificial Intelligence (IJCAI), scheduled to take place in Montreal, Canada, from August 16 to August 22, 2025. To support authors who may experience difficulties obtaining Canadian visas, a satellite event will be hosted in Guangzhou, China, from August 28 to August 31, 2025. Since its founding in 1969, IJCAI has been the premier conference for the global AI community, fostering the exchange of groundbreaking advancements and achievements in artificial intelligence research.

In addition to the main track, authors will be able to submit papers to four special tracks (AI for Social Good, AI and Arts, Human-Centred AI, and AI Enabling Critical Technologies), as well as the survey track; these tracks will post their calls for papers later this year, and their deadlines, procedures and policies may differ from what is described below.

Submissions to IJCAI 2025 should report significant, original, and previously unpublished results on any aspect of artificial intelligence. Papers on novel AI research problems, AI techniques for novel application domains, and papers that cross discipline boundaries within AI are especially encouraged.

A selection of distinguished papers submitted to IJCAI 2025 will be invited for expedited reviewing and publication in the Artificial Intelligence Journal (AIJ) or the Journal of Artificial Intelligence Research (JAIR).

Contact for questions not answered in the call: pcchair@2025.ijcai.org

Summary

- Papers must be no longer than **9 pages** in total: **7 pages** for the body of the paper and **2 pages** for references. All authors must provide author information. All authors are expected to be available to

review.

- Two-phase reviewing: Every paper will receive two reviews in Phase 1. Papers that advance beyond Phase 1 will receive additional reviews in Phase 2, during which authors will have the opportunity to submit a response.
- Supplementary material (e.g., appendices, data, source code, resubmission information) must be submitted by the full paper submission deadline. Paper resubmissions from other conferences are welcome but authors are required to provide resubmission information, as described below.
- Generative AI models, including ChatGPT, BARD, LLaMA, or similar LLMs, do not satisfy the criteria for authorship of papers published in IJCAI 2025. If authors use an LLM in any part of the paper-writing process they assume full responsibility for all content, including checking for plagiarism and correctness of the entire submission. We encourage papers that describe research on or involving LLMs. Text generated by an LLM as part of the paper's methodology or experimental analysis is allowed but needs to be properly documented and described in the paper.

General Information

Page limit: Papers must be no longer than **9 pages** in total: **7 pages** for the body of the paper and **2 pages** for references; an optional ethics statement can be placed either in the body of the paper or in the reference **pages**. For accepted papers, the last two **pages** can also contain acknowledgements and an optional contribution statement.

Authors commit to reviewing: By submitting to the conference, each author volunteers to be entered into the pool of potential PC members/reviewers for IJCAI 2025 and may be asked to review papers for the conference. This does not apply to authors who have already agreed to contribute to IJCAI 2025 in some capacity (e.g., as PC/SPC members of the main conference or special tracks, area chairs, senior area chairs, or members of the organizing committee) and authors who are not qualified to be IJCAI PC members (e.g., undergraduate students, junior graduate students, or researchers with a limited track record in AI). This requirement may be waived in a limited range of exceptional circumstances (researchers leaving academia, parental leave, etc.)

Simplified procedure for resubmission information: Authors must declare whether their paper has been rejected from another peer-reviewed conference in the last 12 months before the submission. They will be requested to upload the latest rejected version (anonymized if necessary) with the reviewer's comments; a cover letter responding to the reviews is optional. To avoid bias, the resubmission information will only be made available to reviewers after they submit their reviews. The program committee reserves the right to reject papers that fail to report resubmission information. Further, reviewers will be encouraged to check whether the resubmission addresses factual issues pointed out in the reviews of the previous version (e.g., typos, incorrect attribution of results, etc.) and to reject submissions that fail to do so.

Contribution statement: For accepted papers, the authors can include contribution information, explicitly indicating the contribution of each co-author to the paper.

Selection Process
